

THE ORIGINAL GILES TACTICAL CAR-15 SLING™

WARNING: Mishandling of firearms may cause serious injury or death. Before practicing with your Original Giles Tactical Sling™ make sure your weapon is unloaded and pointed in a safe direction. When handling the firearm, make sure your index finger remains straight along the weapon's frame and not in contact with the trigger! **Do not touch the trigger until your sights are on the target and you are ready to fire.** If the sling interferes with the safe operation or handling of the weapon, discontinue use. For further safety considerations, consult the owner's manual of your weapon and seek professional assistance.

Installation procedure for:

AR-15-TYPE CARBINES AND SUBGUNS WITH COLLAPSIBLE BUTTSTOCK AND STANDARD DIAMETER ROUND HANDGUARDS

Place webbing strap **A** on the right side of the buttstock and pass it through the bottom sling channel. Bring it around the left side making sure it crosses over strap **B** (the main sling strap) to hold it securely against the stock. Pass **A** back through the top channel, then run it through buckle **C**. Cinch the strap tight and pass the excess webbing back through the buckle to further secure it.

Place the front sling attachment assembly (the smaller of the two) around the handguards just behind the front sight. Pass strap **E** forward under the sling swivel, then pass it back through the swivel. Secure it in place with the hook and loop fasteners. Now, pass strap **F** up through buckle **G** on top of the handguards. Wrap it back down the outside and secure it in place with the hook and loop fasteners.

This is how the attached sling should look. Buckle **H** slides to adjust overall length of the sling. Buckle **I** slides freely along the sling, allowing the sling loop to adjust in length as you move and shift positions. Buckle **J** acts as a stop, preventing buckle **I** from sliding too far back. This is what allows you to release the weapon into the vertical position across your chest.
